

Smoke Alarm Accessories

Brooks Alarm Locator Switch

Model BAALOC

- With interconnected smoke / heat alarms, when one alarm activates, all smoke / heat alarms will sound. A Brooks Alarm Locator quickly and easily identifies the location of the alarm origin.

General

The Alarm Locator silences for a period of approximately 5 minutes all smoke / heat alarms except the one which initially sounded, making it easy to identify the exact location of the fire.

The Alarm Locator automatically resets the five minute period.

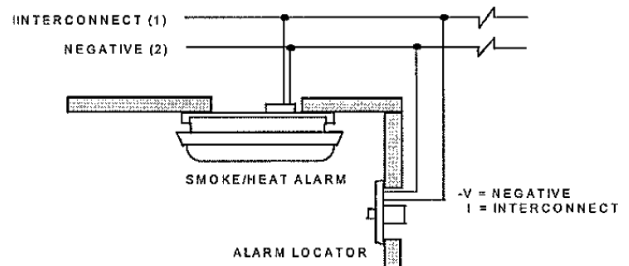

Compatible Equipment

The Brooks Alarm Locator, BAALOC, can be used with all Brooks smoke and heat alarms that have interconnect. Interconnect is available on all Brooks smoke and heat alarms except the EIPFSIB and EIPFSIS 9 volt standalone battery models. Interconnect is also available on the Brooks range of RF (wireless) smoke and heat alarms and a RF locate facility is available on the EIB410RF hand held remote and the EIB411RF wall mount RF remote unit.

Installation

The Alarm Locator is mounted on a single gang switch plate making it easy to mount onto a standard mounting bracket.
