Product Summary

CT-EPGY Etch Primer

Chemtools Etch Primer is a one pass acid hardening metal etch primer formulated for workshop application use on structural steel work, sheets and plates, cranes and storage tanks. This premium primer has excellent adhesion on iron and steel when exposed to mild chemicals and water. Chemtools etch primer is a high build, easy-to-use self-etch primer that provides excellent adhesion for additional top coats, primers, and sealers to metal. It is compatible with all primer surfaces for spot repair & refinishing. It can be applied to steel, aluminium & most metals. This

quick drying primer is designed to provide a tough and durable anti-corrosive base coat.

Features & Benefits:

- Maximum adhesion and corrosion resistance
- Dry to touch in 30 Minutes / handle in 1 hour
- High quality
- Ideal for renovation projects, spot repair and automotive priming
