

# Heavy Duty Telescopic Hot Sticks & Replacement Parts

RITZGLAS Triangular Shaped Hot Sticks are designed to provide the working distance and insulation required to perform routine jobs on overhead electrical systems. The unit comprises a number of sticks that slide into each other with integrated locking buttons. They have a number of advantages over round hot sticks:

- Easy to transport
- Resolves the rotating problems found in round hot sticks, but provides the same strength
- Only the number of sections required for the job are extended, giving great flexibility
- Any section can be replaced if it becomes damaged
- Special tools for attachment to telescopic stick "sundial" adaptors e.g. House Service Fuse Puller (HSFP) are listed on pages V10 to V14
- Test Equipment for attachment to "sundial" adaptors are listed in section H.

The VTT range is supplied with a universal brass fitting "rising sun" head, which attaches to the numerous universal tools that are available. The VTT range is supplied in a green canvas bag, and the sticks have a height measurement and a standard RM4455 disconnect.
